MARCH
2027
SECOND HALF | PREVENTION

BEFORE STARTING
AGREE THE CONTROLS

Brief preparation helps everyone work to the same plan.

1. Hazards and risks

Hazards: Unassessed conditions and tasks that interfere with each other.

Risks: Falls, impacts, dangerous contact and response failures.

2. Before you start

- Confirm task, location and people involved.
- Review risks and applicable controls.
- Check resources, competence and emergency arrangements.

3. Stop and report

- The task changes or a new hazard appears.
- An essential control is missing or instructions are unclear.
- Unclear responsibilities or how to ask for help.

4. What to do: four prevention steps

1

Define

Explain the task and sequence.

2

Observe

Check conditions on site.

3

Agree

Allocate actions and communications.

4

Reassess

Stop if conditions change.

5. Choose the right preventive measure

Situation	Preventive measure
Workplace	Check access, other people and environmental conditions.
Interference	Coordinate simultaneous tasks and exclusion zones.
Equipment / PPE	Check condition, suitability and trained users.
Emergency	Agree how to raise the alarm and reach a safe place.

Good practice: A pre-task discussion does not replace risk assessment or procedures. A significant change requires conditions to be confirmed again.

6. FORTNIGHTLY ACTION Before the next task, gather the team and confirm the main hazard, preventive measure and stopping criterion.

DEFINE • OBSERVE • AGREE • REASSESS
