2027
WORKPLACE SAFETY CAMPAIGN

RAIN AND WIND AT WORK

Check the forecast. Reassess the task when weather changes.

1. Hazards and risks

Hazards: Wet ground, wind, poor visibility and thunderstorms.

Risks: Falls, loss of control, object impacts or electrical discharge.

2. Before you start

- Check forecasts and warnings for the place and time.
- Assess access, supports and loose objects.
- Confirm equipment limits and safe shelter.

3. Stop and report

- Wind or rain compromises the task.
- Thunderstorm or falling objects.
- Loss of stability, visibility or safe access.

4. Anticipate changes and reassess before restarting

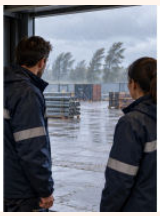

1

Check

Read forecasts and warnings.

2

Assess

Check conditions on site.

3

Suspend

Move to safe shelter.

4

Reassess

Resume only in safe conditions.

5. Adapt decisions to the task and conditions

Situation	Preventive measure
Wet ground	Review grip and route; avoid unsafe areas.
Work at height	Stop if weather compromises safety.
Wind / equipment	Respect manufacturer limits and instructions.
Thunderstorms	End exposure and follow the emergency plan.

Good practice: A weather warning does not replace on-site assessment. There is no single wind limit for every task; check equipment and context.

6. MONTHLY ACTION Before outdoor work, confirm forecast, stopping criteria and safe shelter. Report uncertainties before starting.

ANTICIPATE • SUSPEND • REASSESS

IPMA: weather warnings HSE: work at height
