WORKPLACE SAFETY CAMPAIGN

PERSONAL PROTECTION
AT HEIGHT

Check the complete system before exposure to a fall.

1. Hazards and risks

Hazards: Damaged equipment, unsuitable connections or uncertain anchors.

Risks: Fall, impact or suspension with serious or fatal injury.

2. Before you start

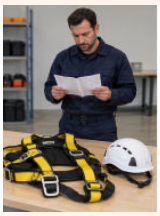

- Confirm training and rescue plan.
- Check PPE and manufacturer instructions.
- Confirm system, anchor and fall clearance.

3. Stop and report

- Damaged PPE or equipment involved in a fall.
- Unknown history or incompatible connection.
- Unconfirmed anchor, clearance or rescue.

4. Prepare PPE before starting work at height

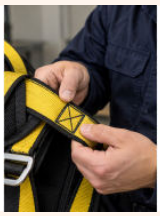

1

Select

Confirm the system specified for the task.

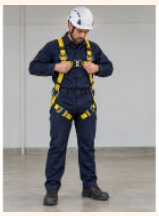

2

Inspect

Check webbing, stitching and connectors.

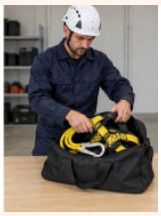

3

Adjust

Fit harness and helmet as instructed.

4

Maintain

Store as instructed.

5. Components: check suitability and compatibility

Situation	Preventive measure
Fall-arrest harness	Adjust size, straps and buckles as instructed.
Connections / connectors	Use compatible components within the specified system.
Anchor	Use only the suitable anchor designated for the task.
Helmet / chinstrap	Check model and fit against risks and the manual.

Good practice: A harness alone does not guarantee protection. Check compatibility, anchor, fall clearance and rescue. Do not improvise connections; prioritise collective protection.

6. MONTHLY ACTION Before work at height, inspect PPE condition and fit; confirm the complete system with the team. Report doubts or defects.

CHECK • ADJUST • CONFIRM THE COMPLETE SYSTEM
